

NAVAL REACTORS
DOE ORDER IMPLEMENTATION BULLETIN 241.1-73
REVISION 0

Consistent with Naval Nuclear Propulsion Program overall concept of operations, the following provides specific implementation guidance for scientific and technical information management. This guidance takes precedence over relevant guidance in DOE Order 241.1 and guidance found in other DOE documents.

1. It is the Naval Nuclear Propulsion Program Policy to allow collection, storage, announcement, distribution or exchange of scientific and technical information including computer software involving the Naval Nuclear Propulsion Program outside of those activities under the Director's cognizance only when specifically approved by Naval Reactors.
2. Naval Reactors Headquarters will determine whether dissemination of scientific and technical information, associated with the Naval Nuclear Propulsion Program, to foreign countries is consistent with program policy. Naval Reactors Headquarters will also determine whether software is provided to the Energy Science and Technology Software Center or DOE Headquarters activities.
3. Oversight and evaluation of scientific and technical information management at Naval Reactors contractor sites under the Director's cognizance will be conducted by the Naval Reactors field offices with additional oversight provided by Naval Reactors Headquarters.
4. Requests for waivers and exceptions to specific requirements of DOE Order 241.1 or this Implementation Bulletin will be submitted to Naval Reactors Headquarters for review and approval.
